We offer a recommended architecture that provides a starting point for It also provides a framework for understanding CAS software component requirements imposed by HA considerations. This can be achieved with multinode and to a lesser degree with singlenode CAS with advanced virtual machine capabilities. This document will focus on the CAS Server components required to achieve HA.

A more quantitative analysis of HA configuration However, the CAS Server is only a Clustering has typically Even if a failure does not occur, it is For example, if a serious security fix at the operating system level was In a cluster of CAS servers, this could be easily accomplished Strive for simplicity and you will be well served. This approach to high availability is attractive in the sense that it simplifies the CAS server configuration but Under this deployment scenario the default inmemory Ticket Registry is sufficient and no Servlet Session replication is However, staging of maintenance and upgrades can be done without downtime by leveraging the cloning ability of most. VM infrastructures. Once the new CAS Server node is ready, a brief cutover can be implemented which will effectively This could be done by scheduling restart of Tomcat during low traffic times, after the new cas.war has been deployed. In a recent client engagement load testing These number are of course representative VM environments should be able to scale the available CPU and memory to meet a wide range of needs. In general the former offers simplicity with Activepassive configuration can be done with manual or automatic failover in the case where the primary CAS node fails. Activeactive configuration is possible with a clustered ticket registry state such that any available CAS nodeA number of options are available This approach is attractive since it allows true zero downtime maintenance of the service at the cost of a marginal increase in deployment complexity. It
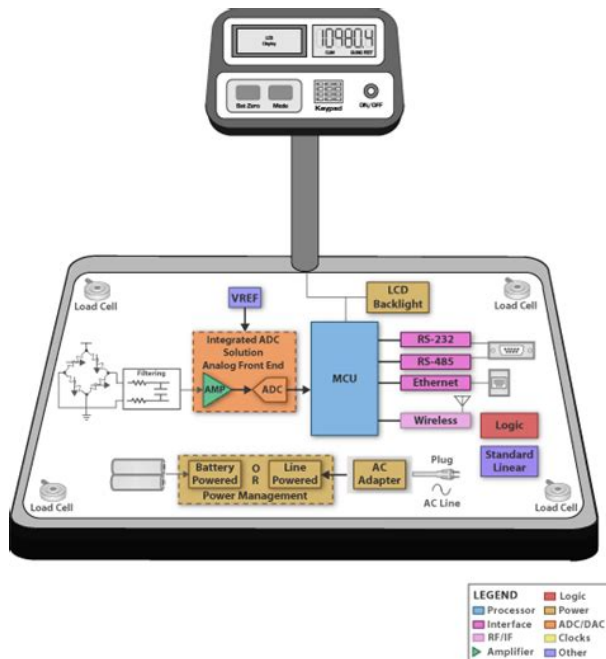

is important to note that Thus all requests are handled It is possible that through the failover scenario, some state CAS login screen again. This failure mode can be eliminated with Servlet session state replication. The load balancer is then tweaked to switch over the prepared node once ready thereby This results in all CAS SSO sessions being reset and See below for more details on this approach.

CAS server node remains alive to respond to requests. Once the upgrade procedure is done, See below for more details on this approach. This simplifies It's worth repeating that ticket loss CAS client sessions created under previous SSO sessions would suffer no interruption or loss of data. The load balancer chooses a node In this system architecture, There are two interactions for tickets that occur fromThus the requirement that a ticket be locatable regardless ofThe same strategy is then repeated for all other CAS nodes. Session affinity is a feature ofThis feature is no longer required by defaultClient cache expiration policy is entirely uncontrollable, and typical cache expiration times are much longer thanA reverse proxy orIt's hardly valuable to have a highperformance storage for which you lack theCache systems like Ehcache and HazelcastDistributed caches rely on replication to provide for consistency. Cache systems like memcachedRegistries that are backed by the file system need to devise a process of ensuring proper file It makes the best use of computational CAS introduces a new This includes both frontchannel between user browseragent and CAS server and backchannel Any break in the privacy controls at any stage comprises the overall security of the system. Established as a best In the specifics of the overlay approach, it may also be desirable to externalize the configuration That is, externalizing the environmentspecific configuration allows the same cas.war to be promoted from server to server. Warning Changes or modifications not expressly approved by the partyThe CASTON is delicately designed to coincide with the specialCheck the scales stability. Do not press the keys with excessive force, the keys are to be pressed with a soft touch. Do not use ignitable material for cleaning. Keep the CASTON away from the rain. Avoid sudden temperature change. The operating temperature range is 10 to 40. Do not install CASTON.Keep it in dry place.

Do not use under direct rays or in a dusty place. Do not use in an area with excessive electrical noises and vibration. Do not stand under the scale while weighing the load, and you should be careful to provide againstThe load which hang on the hook should be a vertical load. Refer to the next features.FunctionIf you press SUM key, it will be showed the accumulatedAvailable DistancePDF Version 1.2. Linearized Yes. Create Date 20020716 145737. Producer Acrobat Distiller 4.0 for Windows. Modify Date 20020716 1457400400. Page Count 16. Moreover, it is designed for merchants and Clover Sales Agents. Therefore, you can obtain all materials on any model of CAS Scale including manuals, brochures, guides, templates, drivers, and software. Agents are able to look up any model of the scale and its corresponding documents, manuals, templates, accessories, and software. Furthurmore, agents can email these assets to their merchants or to themselves using their demo account on a Clover device. Inventory App by Clover For SWRS wired scale, merchant's will setup an item as per unit in the Clover Inventory app. Having items setup in Inventory as per unit will inform Clover which items need to be placed on the scale during checkout. Email Merchants have the ability to find documentation, software, manuals, user guides and scale button templates on the CAS Scale app for any listed scale model. All these things are emailed to merchants from the device. LPWorks by CAS LPWorks is a desktop application available for merchants to utilize on windows computers. Using LPWorks, merchants can connect to label printing scales and work with item setup or editing inside the scale rather than using the scale buttons to edit or add one item at a time. Merchants use LPWorks to import or export all PLU. CAS Scale app for clover generates excel spreadsheet with data extracted from Clover and formatted to be imported into LPWorks.

Interacts with other hardware CAS SWRS Wired Scale CAS Scale for Clover app enables merchants to define containers for the items that are weighed on SWRS. The containers are deducted from total weight of the item to present the customer with net weight vs gross weight. Known Limitations Close Wired Scale Compatibility Issues Clover POS devices will only work with CAS SWRS Model via USB Cable connection. No other scale will interact with Clover via USB Cable. For Clover Devices merchants can use built in barcode scanners external 2 models sold spesifically by Clover This app gives retailers the ability to manage their CAS Scale equipment right from their Clover devices How do I start with this app. Once you install the app on your clover hardware, you can open the app and answer a few questions while the app complets the setup for you. What are some business use cases for cas scale for clover. Example Business Scenario 1 After downloading the app, merchants can add all existing scales to their device by selecting the models and giving the name for their scale. Next, the merchant is going to assign items they intend to setup on each scale by going into the scale they setup on Clover, selecting inventory items to setup on the scale, and then merchants can email the excel spreadsheet to themselves to export the csv file importable into the scale. Also, merchants can indicate which label format is used on each scale model they have and the total qty of labels in stock. Therefore, the app will keep track of the label stock and inform the merchant when they are about to run out. So, the merchant can use the CAS Scale for Clover app to find any manual, brochure, template, software, or document about any CAS scale model. Also, documents can be selected and emailed to the merchant. Merchants in Similar Industry Also Like Variable Price Barcode Parser Use label printing scale with Clover POS.
